Sprint Goal

Based on our discussions with the client, we decided that some of the major features desired in the third sprint are filtering the quiz section by course durations, making students searchable by any field, fixing the refactor/complete upload script and adding a notes section for notes to be added by the professor for individual students. Other tasks include UI fixes and improving the code coverage. The majority focus of this sprint is on making the quiz section relevant and up-to-date. The search section also needs to filter and display searched values. The keys for searching can include UIN, name, email etc. Notes for individual feedback need to be displayed as pop-ups and pop-ups should be editable.
